

Industrial fabric *samples*

Our partitioning and screening solutions offer a range of specialist heavy duty lightweight material options.

Base fabric is reinforced woven polyester fire-retardant fabric, with PVC coatings. The type of base fabric and coatings used on your solution is dependent on your projects requirements and the fabric's properties and performance ranges (e.g. foam finish, additional lacquer, UV protection etc). We also supply a non-combustible glass fabric with PU coating for high temperature resistance.

Benefits

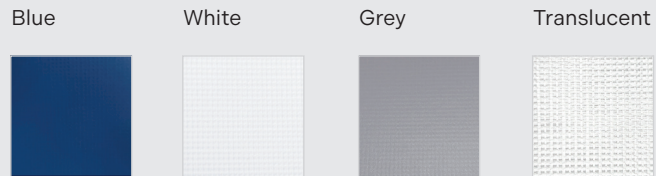

- Select material to meet your project and business needs (e.g. fire-retardant, fire-resistant, antimicrobial, translucent, UV protected)
- Translucent material allows natural light transit – no additional lighting needed
- Create compliant fire-resistant partition walls – meet H&S and insurance requirements
- Waterproof PVC coating is suitable for external applications (e.g. canopy walls or airlocks)
- Select colour for H&S compliance or to improve the environment for employees and visitors

We hold the following performance data on our range of industrial fabric. Available on request.

- Base fabric
- Coating type
- Coating adhesion
- Weight
- Thickness
- Weave
- Thread count (warp/weft)
- Tensile strength
- Tear strength
- Fire classification (flame resistance/flame retardancy)
- Burning behaviour
- Temperature resistance (operating temperature)
- Sound reduction
- Thermal resistance
- Water penetration
- Translucence
