**Our partitioning range includes a variety of door, access and crash barrier add-ons.** Enhance your solution to improve workplace functionality and efficiency. Add additional safety and security protection, maintain temperature, stop heat loss, reduce noise pollution, prevent cross-contamination, and shield personnel. We deliver customised integrated solutions for your individual project, removing the need for you to connect multiple suppliers.

**Fastflex® – fast action doors**

A motorised access point solution suitable for internal and external use. Available in either heavy duty reinforced PVC coated fabric (fold or roller mechanism) or stainless steel (roller mechanism): with multiple safety features including bottom edge protection and photo safety beam.

Fastflex is supplied in standard sizes and colours, or custom-made to suit your requirements (e.g. vision panels and alternative colour options). Combine Fastflex with our partitions to create access points, internal airlocks or to enclose external canopies.

**Flexistrip® – PVC strip curtains**

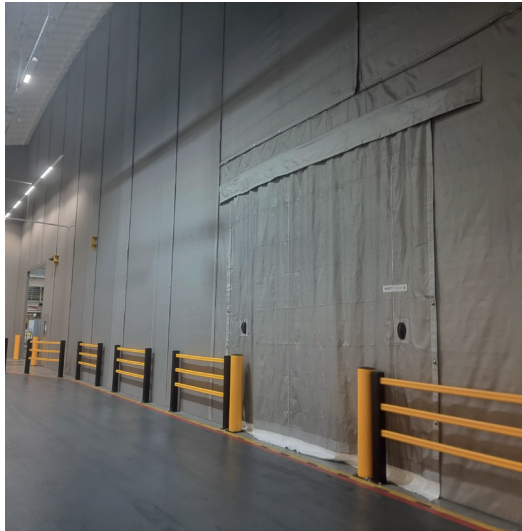

Flexistrip curtains are used to create fixed or retractable, quick unrestricted access points for dust and temperature controlled areas. Use as a static option or mount on a track to push aside when needed.

Available in a range of material finishes, specifications and colours, we also offer a comprehensive range of tracks and runners (e.g. universal keyrail, sliding track, hook on track) and stainless steel options for high-care areas. Designed to limit flame spread and with operating temperatures from -38°C to +40°C, fire retardant PVC curtains are also suitable for use in controlled hot works areas.

**Flexicurtain® – PVC coated curtains**

Establish easy to use curtain access points in your customised partition wall, or provide convenient weather-protected entry for external canopies and enclosures.

Made from the same industrial heavy-duty yet lightweight material as our fabric partitions, Flexicurtain is easy to deploy and retract, providing quick, temporary access for machinery or equipment with dependable long-term durability.

Include vision panels for line of sight, and wind load straps can also be included for external applications in high-wind locations.

**Flexidoor® – crash doors**

A robust, practical and economical, two way crash swing door solution. Flexidoor is used to create fast, free-flowing, self-closing door access between areas.

Available in a number of configurations to suit visibility requirements (e.g. vision panels), traffic type and environment. Typically manufactured in rubber and PVC with heavy-duty steel framing, aluminium framing can be specified for environments requiring a tough food grade solution.

For heavy usage areas, choose high impact resistant and low abrasive wear full rubber panels.

**Anchorwall® – steel pedestrian doors**

Anchorwall steel doors offer robust, secure and quick to access pedestrian points. Ideal for use within our full range of partition walls,

Anchorwall doors are electrostatically powder coated for durability and available as standard in grey, sandstone, white or stone colours to suit your partition, environment and business needs.

Customise your doors further colour options, glazing panels and digilocks to provide additional security and create restricted access zones.

**Easiguard® – crash barriers**

Easiguard is our range of steel safety crash barriers, designed to protect partition walls and personnel from potential collisions and fork-lift damage. A range of options are available including barriers, bollards, fences, rails and gates.

We design and supply a range of configurations including low-level and part-height solutions. Supplied ready for on-ground surface mounting or in-ground, choose from hot dipped galvanised finish or bright yellow powder coating to ensure key parts of the system stand out in any environment.
