At Westgate Global *we protect momentum*

Westgate Global protects momentum and keeps data centre projects moving. From weather protection screening to ensure critical path activities run to schedule, to dust containment to enable early phased handovers, you need solutions that perform in live, high-risk spaces. Our systems protect people, assets and keep mission-critical programmes on track.

Protectors of momentum

Expert assurance

We bring calm precision and assurance to demanding environments.

Solution design and innovation

We design, refine and adapt our solutions so customers can meet their challenges faster and smarter.

World class product range

Our market-leading solutions have been developed to solve real world challenges.

Safety and compliance

Our systems, testing and accreditations protect people, assets and reputations.

Live environment protection

We keep crucial programmes on schedule and protect momentum in live environments.

End-to-end project management

We take responsibility from first brief to final sign-off. We excel in planning around live operations.

Risk and delay reduction

From early planning to final handover, we excel in reducing risk, disruption and delay.

Global consistency

We deliver the same engineered systems, standards and behaviours across every location.

Protecting momentum isn't just what we do; *it's what drives us*

Why Westgate Global

With decades of experience in manufacturing, supplying and installing data centre screening, we are the acknowledged experts in our field.

We're the people who've been there, seen it and solved it. Practical minds who thrive in complex, live environments — steady hands that make things work, ensure safety and compliance are delivered, and keep mission-critical projects moving.

Flexiscreen® *engineered protection screens*

Temporary weathering screen

Keep your data centre construction site active and on-track in all weathers.

Planning for Flexiscreen® weathering ensures data centre build programmes are independent of weather – accelerating critical paths by weeks or months.

Delivering weather protection, thermal insulation, sound reduction and dust containment, work can continue uninterrupted. Time-sensitive construction processes and internal fit-out can begin before the building's facade is complete. Protect concrete pours, curing cycles and sensitive installations in cold climates – preventing delays.

Project-specific wind load calculations ensure Flexiscreen's structural integrity.

Installing Flexiscreen® means the programme is no longer weather dependent on two critical path items – the slab pour and the cladding installation.

Temporary dust screen

Accelerate and de-risk your data centre construction programme.

Protect live or early access areas with Flexiscreen®. Enable early client handover through protected phased openings – create ISO Class 7 cleanroom areas next to active construction.

Prevent dust and debris contamination into adjacent areas during construction or refurbishment, segregating dusty processes from fit out works and server installations.

With a Flexiscreen® in place, interior fit out can begin ahead of schedule – keep dust, moisture, and cold out, protecting finishes, commissioning equipment, and handover stages.

The Flexiscreen® dust screen is invaluable. It keeps the completed area totally clean allowing us to concentrate on the rest of the build.

Commissioning and *testing solutions*

Flexiscreen® Heat Load

Heat load test screening

Our temporary modular heat load containment solution enables risk-free hot and cold aisle testing during commissioning.

- Highly accurate and quality benchmarking data
- Rapid install, no dust, no disruption, no damage to whitespace
- Relocatable and reuseable over multiple projects, no waste
- Flexible high tensile material fully seals around services
- Built in access panels and heat bank openings

Hoardfast® Enclosure

Dust protection bubble

Protect the operational data hall/server room from dust ingress contamination during construction works.

- Maintain controlled access into the protected space
- Support phased works without stopping surrounding construction activity
- Modular, quick self-install and demount
- Relocate and reuse multiple times
- Easy clean, hygienic PVC finish

Our global *expertise*

With nearly 50 years of expertise in temporary protection, we bring the assurance of a trusted, accredited specialist and the global consistency that comes from working with some of the world's biggest brands.
